

# Prophet Reloaded : 100 programs for Prophet 6 / Prophet 6 desktop

**Prophet Reloaded** includes 100 programs, offering a wide/balanced representation of every kind of sound : bass, lead, arpeggio, pads, FX, brass, strings...

**Prophet Reloaded** can be seen as a perfect addition to factory presets : offering an alternative to the excellent factory programs, allowing a discover of the Prophet 6 from another perspective.

If the Prophet 6 has the ambition to be a re-creation of the Prophet 5 by its own designer, to the point that it shows the prestigious « Sequential » labe on its frontl, it is foremost a wonderful synthesizer, offering a timeless potential, able to sound perfect for nowadays electro track : it is this potential that **Prophet Reloaded** delivers. **Prophet Reloaded** revisits what everybody knows about the Sequential Sound.

## How to load **Prophet Reloaded** in your Prophet 6 / Prophet 6 desktop ?

Before any loading attempt, it is safer to save your own programs stored in your Prophet 6. For this purpose, please refer to the page 55 of your manual. **Prophet Reloaded** contains 5 Sysex files, all 5 files being made of the same 100 programs (SYX files), each being dedicated to be loaded in the user bank of your choice (from 0 to 4). The suffix in the file's name indicates the program numbers that will be overwritten in the Prophet 6 user bank. You don't have to load all 5 files, only load the file corresponding to your destination user slots.

Prophet Reloaded is a SYX file, you will need a Sysex handler. C6, from Elektron, is free and one of the most reliable, but any other Sysex handler software should be fine. On your Prophet 6, start by choosing what kind of MIDI connection will be used to make the Sysex transfer : you can choose between the traditional MIDI din port, or the USB port. Selecting the USB port or MIDI port is detailed at the page 12, paragraph 8 of your Prophet 6 user manual. Plug your cables accordingly between your computer and your Prophet 6.

Once you have chosen your MIDI port, in your Sysex software handler, make sure that the output MIDI port corresponds to the input MIDI port of your Prophet 6. Open the **Prophet Reloaded** sysex file in the Sysex software handler, and press « send ». A few seconds are required for the Prophet 6 to load the programs one after the other (at this step, you should see your program numbers incrementing on the LCD sreen of your Prophet 6). That's it ! **Prophet Reloaded** and all its programs are loaded in your Prophet 6 and you can start to play them right now !
