Thank you for your purchase.

First thing to do is to install kingkorg Neo librarian on Korg website.

Please back up all your own programs before loading the bank.

The file contains the factory programs (memories 1 to 199) and RC NEO 101 (101 programs) using memories 200 to 300.

Once you have load the file into the librarian you can send them all (factory + RC bank) to Kingkorg NEO or choose in the left column of the librarian, one program (one by one) and send them to the slots you want in KK Neo (select the memory slot before sending). If you use the latter method, don’t forget to use the write function in NEO if you want to keep the patch.

Please look at librarian manual if needed.

Thank you
