

Thank you for your purchase.

Please always make a backup of your own patches before loading new ones.

The Zip file you get contains patches in a single patch format. I found it the easiest way to import the patch where you want on your Monostation, depending of what unused memory you have left.

You should use the replace patch function in Components. Clic on a memory slot then choose REPLACE it will ask you to go to a folder where you put the downloaded patches. Just select to one you want to put in that slot and you will be able to send it to your Monostation.

Thank you

Richard
